(i) Academic qualifications:

- 2025-Now, Postdoctoral researcher at the Department of Computer Science of the University of Hong Kong under the supervision of Prof. Hengshuang Zhao
- 2020-2025, PhD in the School of Electronic Information and Communications at Huazhong University of Science and Technology under the supervision of Prof. Xiang Bai

(ii) Previous academic positions held:

- Jan. 2022 – Dec. 2024 Intern at Baidu Vision Technology Department and research on multi-modal 3D object perception in autonomous driving
- Sep. 2020 - Dec. 2020 Intern at Huawei Noah's Ark and research on the design of end-to-end 3D object tracking algorithms

(iii) Present academic position held:

My research focuses on embodied AI and autonomous driving, including 3D perception, vision-language-action models, and world models. I have published **40+ papers** in leading venues, including NeurIPS, ICML, CVPR, ECCV, and TPAMI. Google Scholar reports **2,603 citations** and an h-index of 18.

My current research aims to build general-purpose embodied intelligence through:

1. **Embodied Data Engine**, including human data collection, human-to-robot transfer, and corner-case feedback;
2. **Vision-Language-Action Models, World-Action Models, and VLN Systems** for manipulation, navigation, and long-horizon tasks;
3. **4D World Models and Embodied Simulation** for policy learning, virtual evaluation, and sim-to-real transfer;
4. **Efficient and Streaming Embodied Inference**, including distillation, acceleration, and real-time deployment;
5. **Intelligent Robotic OS and Cross-Embodiment Deployment**, unifying interfaces and foundation models.

(v) Professional qualifications, prizes and awards:

- Fall 2019: **Master National Scholarship Winner**, School of Artificial Intelligence and Automation, HUST.
- Spring 2020: **"NavInfo" Scholarship Winner**. **(Top 3 of 300+).**

(vi) Research output:

- Three-dimensional object detection method and system based on weighted channel features of point cloud. *Zhao Xin, Huang Kaiqi, **Liu Zhe.*** **(U.S. Patent)**
- A robust three-dimensional object detection method based on ternary attention mechanism. *Bai Xiang, **Liu Zhe**, Zhou Yu, Huang Tengteng.* **(Chinese Patent,Authorized**)
- A three-dimensional object detection method, device and system based on DETR structure. *Bai Xiang, **Liu Zhe**, Hou Jinghua.* **(Chinese Patent,Submitted)**
- A three-dimensional object detection method, device and system. *Bai Xiang, **Liu Zhe**, Hou Jinghua, Wang Xinyu, Zhao Hengshuang.* **(Chinese Patent, Submitted)**

(vii) Leading Projects (2025-2026):

1. **AI Glasses:** Efficient 3D perception, spatial understanding, and memory retrieval (Huawei).
2. **4D MLLM:** Unified vision-action and vision-language-action modeling with a 0.5B model (Huawei).
3. **4D World Model:** Occupancy-guided, physically aware video generation (Huawei).
4. **World Model + RL:** Efficient world modeling for autonomous driving (Changan).
5. **Streaming VLA:** Memory-dependent, spatially aware policy inference (ACE Robotics).
6. **Ongoing:** Efficient world models, efficient VLA, and embodied OS.
